

PROJECT: Phishing Threat Intelligence Dashboard

DURATION: 4 weeks

TOOLS: Splunk, VirusTotal, URLScan.io, WHOIS, MITRE ATT&CK

WHAT I BUILT:

A complete phishing analysis system analyzing 11 real-world phishing samples. Built a 6-panel Splunk threat intelligence dashboard visualizing IOC data, risk levels, and MITRE ATT&CK technique mapping.

KEY FINDINGS:

- 54% of samples classified as High Risk.
- Identified attacker abuse of AWS S3 and Cisco infrastructure.
- Mapped all samples to 4 MITRE ATT&CK techniques.
- Detected 4 newly registered throwaway domains.

SKILLS DEMONSTRATED:

Threat Intelligence · IOC Analysis · SIEM (Splunk) ·

MITRE ATT&CK · Security Documentation · Dashboard Creation
